

ECOSPEED®

PERFORMANCE AND PROTECTION

Cleaning a superyacht

Fouling on a ship coated with Ecospeed can be removed efficiently and safe underwater with the correct equipment. This allows a diver to very simply remove all fouling and this on the flat areas of the hull as well as the harder to reach nooks and crannies.

Always a clean boat

ECOSPEED®

PERFORMANCE AND PROTECTION

Onetime application

Ecospeed can be applied very fast and easy. This non-toxic coating system stays on the hull for the entire lifetime of the boat.

You will not have to worry about the underwater hull of your yacht ever again. Time you spend on deck will become leisure time again. What is more, the environment will thank you.

Always a clean boat
